

# Animal test of four products

## Protocol Brief:

1. Initial wound area: 9 cm<sup>2</sup> on all 24 rats
2. Individual space of each rat (Temp.: 26 °C)
3. Sufficient food and water supply
4. No dressing change during the 4 weeks
5. No antibiotics treated after operation
6. Cover the wound bed fully w/ PU film ( OP Site)  
before wrapped with an elastic bandage
7. Weekly observation till 4th week

1. Draw a square on the back

2. Make a wound (3\*3 cm<sup>2</sup>)

3. Cover the wound with dressing and OP site

4. Wrap the wound
